

# Year 1 – Technology Around Us

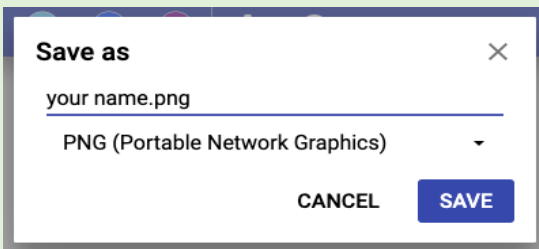

Technology is something that helps us in lots of different ways.

Writing on a keyboard is called **typing**.

Look for this icon to **save** your work.

Printer: An output device. The computer sends information to the printer where it is printed on paper.

Monitor: An output device. It shows us information from the computer on the screen.

Computer: Inside the computer are two very important parts. The processor and the memory.

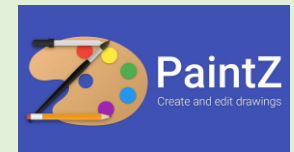

Laptops have a different mouse tool. The large space is a track pad and the two buttons are the keys.

Left button:  
select

Right button:  
menu tool

Use the Paintz website to practice clicking and dragging.

Webcam: An input device. We use this to take pictures and videos. It can be used to see and talk to friends and family around the world.

Mouse: An input device. We click the buttons on the mouse to make choices and give the computer information.

Keyboard: An input device. We use it to type words, numbers and symbols.
